

## Additional Tutorial Exercises

### Question 01

An institute offers following diploma programs.

Program No.	Program Name	Registration Fee
1	Java Programming	1500/=
2	Web Designing	1000/=
3	Computer Network	2000/=

Write a C program to take registration details by entering program number.

The program should terminate the registration process when the total number of registrations becomes 100 or if user inputs -99 as the program number.

Calculate and display the total registration fee for all programs.

Hint : Need to use break statement

### Question 02

An online store pays their delivery people according to the deliveries they complete during the day.

The charge for each delivery order is given below.

Distance (km)	Delivery charge (Rs)
distance <= 3	50.00
3 < distance <= 8	75.00
8 < distance <= 15	125.00
15 < distance	150.00

Write a C program to calculate the total delivery charge of a delivery person for a given day.

The user should be able to input any number of distances that the delivery person has completed until the user confirm there are no more entries.
